

BL-CS-008 · Support Search Quick Guide · 25 September 2026

Find a shipment support case

Beacon Logistics provides delivery support for independent stores. Use the support workspace to find shipment cases, check the latest customer update, and follow an unresolved delivery question.

Start with a reference

Enter the complete shipment reference, such as BCN-2048, or a support case number. If the reference is unavailable, search for a depot name and the delivery date. Select your store's workspace before searching; results belong to that workspace.

Status	Meaning	Your next step
Open	Support has received the question	Add missing shipment details
Investigating	Depot or carrier review is in progress	Read the promised update time
Resolved	Support has recorded an outcome	Confirm the answer or reopen the case

Keep case notes useful

Describe the issue without including payment details, identity documents, or a customer's full address. Use the secure attachment link if the case owner needs a delivery photograph. Do not send your sign-in token to the support desk.

If a recent case is missing

Allow five minutes after intake, then repeat the search using the case number. If it is still absent, contact support@beacon.example with the reference and submission time. Beacon's internal recovery procedure is handled by operations; customers do not need to run recovery commands.

Service desk: weekdays 07:00–19:00 UTC. Delivery-critical cases receive an initial response within one hour.
